## Krishnan Suthanthiran Launches: International Society for Radiology and Imaging

Krishnan Suthanthiran, President/Founder of TeamBest Global Companies (TBG), is pleased to announce the establishment of the **International Society for Radiology and Imaging (ISRI),** 

adding to three other initiatives he recently launched—the International Society for Radiation Medicine & Molecular Imaging (ISRMMI), the International Society for Therapeutic Radiology and Oncology (ISTRO), and the International Society for Ultrasound Imaging (ISUSI). Though each society speaks to a different audience, all four societies look to help establish evidence-based Proactive, Preventive, Primary, and Dental Care Wellness Centers as well as a Best Cure Health System of Express and Mobile Clinics linked to general and multi-specialty medical centers. The societies will hold annual conferences and technical exhibits and will be managed by Best Association Headquarters, Inc., based in Springfield, Virginia through Suthanthiran's non-profit, Best Cure Foundation.

Ultrasound is the future of imaging—higher resolution, 3D/4D, image storage for comparison, and integration of some level of artificial intelligence to help with and improve diagnosis. TeamBest Global, along with other companies worldwide, is working to refine ultrasound technology and to offer ultrasound as a viable alternative to MRI/X-ray/mammography Imaging for soft tissue imaging. One of ISUSI's major goals will be to advance the global capabilities and affordability of ultrasound imaging.

ISTRO's mission is to educate the public, medical and insurance professionals, and government officials/ elected members alike, to make the conversation around oncology more transparent. Additionally, ISTRO is looking to collaborate with various professional medical societies to award more than 100 individuals who have demonstrated extraordinary work each year. ISTRO also plans to publish free online journals to educate everyone.

**ISRMMI** is excited to launch all of the new modalities of molecular imaging and Theranostics, as well as the promising future prospects of Targeted Systemic Radiation Therapy. These advancements bring about significant improvements in clinical outcomes at a more affordable cost.

For more information about each of these societies, please visit www.isri.ca, www.isusi.org, www.istro.net, and www.isrmmi.org.
